DevOps Engineer with hands-on experience in building, automating, and managing cloud-based applications for an Australia-based e-commerce platform. I work closely with AWS services to set up and manage infrastructure, build CI/CD pipelines to automate deployments, and use Infrastructure as Code to keep environments consistent. I have practical experience deploying and managing containerized applications and supporting production systems. I focus on improving deployment speed, maintaining system stability, and quickly resolving issues to ensure smooth day-to-day operations.

WORK EXPERIENCE

Associate DevOps Engineer — Delta 360 Services Pvt. Ltd. | Aug 2024 – Present

DevOps Engineer supporting a production e-commerce application for an Australian client with responsibilities including infrastructure automation, CI/CD pipelines, Kubernetes (EKS), GitOps-based continuous delivery, and production support.

- Worked on a production-grade e-commerce platform requiring **high availability, secure cloud infrastructure**, and frequent deployments across development and production environments.
- Automated application deployments to **reduce manual intervention** and improve overall release reliability.
- Designed and maintained **CI/CD pipelines using Jenkins** to automate build, test, quality checks, and deployment processes.
- Integrated **SonarQube** into CI pipelines to perform static code analysis and **enforce code quality standards** before deployments.
- **Containerized frontend and backend services using Docker**, ensuring consistent and repeatable builds.
- Deployed and managed containerized applications on **Kubernetes, handling workloads across multiple environments.**
- Provisioned and managed **AWS infrastructure using Terraform**, following Infrastructure as Code best practices.
- Implemented **IAM role-based access** and **bastion host architecture** to **enhance security** and controlled access.
- Used **Ansible for configuration management**, server provisioning, and maintaining environment consistency.
- Actively monitored applications and Kubernetes clusters, troubleshooting **pod failures, pipeline errors, and runtime issues**.
- Reduced **manual deployment effort by 50%** and improved **deployment speed by 40%** through automation.
- Decreased **release failures by 30%** and improved **production issue resolution time by 25%**, maintaining stable system operations.
- Wrote basic **Bash shell scripts** and **YAML** configurations for CI/CD pipelines and Kubernetes deployments.
- Assisted with **rolling deployments** and basic incident troubleshooting in production environments.

CORE SKILLS

- **Cloud & Infrastructure: AWS (EC2, VPC, S3, IAM, Auto Scaling, CloudWatch)**
- **CI/CD & Automation: Jenkins, CI/CD Pipelines**
- **Containerization & Orchestration: Docker, Kubernetes (EKS)**
- **Infrastructure as Code: Terraform**
- **Configuration Management: Ansible, Ansible Playbooks**
- **Monitoring & Observability: Prometheus, Grafana**
- **Operating Systems: Linux (Ubuntu, Amazon Linux)**
- **Version Control & Collaboration: Git, GitHub**
- **Networking Fundamentals: TCP/IP, Load Balancers, Security Groups**
- **Security & DevSecOps: IAM best practices, secrets management**
- **Kubernetes Networking: Ingress, Services (ClusterIP, NodePort, LoadBalancer)**

EDUCATION

Tilak Maharashtra Vidyapeeth University, Pune — **Master of Computer Applications (MCA),** 2023–2025
St. Gonsalo Garcia College, Mumbai — BCOM (IT and Mathematics) , 2020–2023
